

GROW

Low-Rise GROW Trays

Promoting proper drainage in high-density growing operations

Spacesaver's low-rise trays provide strength and durability with minimal maintenance. Designed to integrate with multi-tier GROW mobile systems and sized for a variety of standard tables, the trays prevent accidental run-off and promote proper drainage and airflow. They also fully integrate with existing lighting and plumbing systems.

Choose between two different types:

STANDARD SIZE OPTIONS:

3x4, 4x4, 3x8, 4x8

* Custom sizes are available, consult your local Spacesaver Distributor

STRAIGHT-DRAIN TRAYS provide drains at two corners. The trays can be set at an angle by adjusting the beam heights for desired water flow. Reinforcements located under the tray are slotted to accommodate lighting fixtures/brackets.

GUTTER TRAYS are angled to promote drainage, featuring a gutter that slopes to a single drain at one corner. The entire gutter is located in front of the grow area to maximize square footage of growing space. Reinforcements located under the tray provide attachment points for lighting fixtures.

INTEGRATE WITH YOUR GROW OPERATION

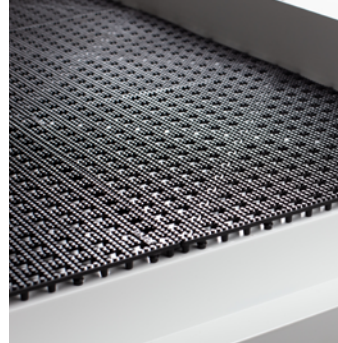

Tray angle can be adjusted by moving beams

Sized to fit standard tables; custom sizes available

Drains integrate with existing plumbing

Optional accessories help prevent moisture build-up under pots

READY TO GROW MORE?

See for yourself how GROW can make a difference in your facility. Integrate GROW high-density shelving with any lighting or climate control system to optimize space, save on energy costs, and maximize cannabis yields.

Contact Spacesaver to learn more or to arrange a free, no-obligation consultation with your local Spacesaver representative.
